

THE STANDARD REEL LEASH

The Standard REEL Leash is the first and most widely distributed KITE BOARD LEASH. All Oceanus REELS are strong, lightweight retractable devices adapted to a saltwater environment. To date Oceanus supply REELS to distributors, dealers, and schools in 20+ countries. All board REEL leashes come with a seven-inch long shock cord to aid in absorbing the initial pull on a fall.

THE EEL MEDIUM DUTY REEL LEASH

This is the latest and most versatile model. The EEL incorporates a number of popular modifications all wrapped into one unit. Oceanus have re-enforced the feed port of the unit from the inside making this model more similar in size, weight, and appearance to the STANDARD REEL, while offering the increased durability of the Heavy Duty REEL RE-ENFORCED model. In place of the standard shock cord is a 30-inch rope extension. This rope extension is doubled over, stitched, then rubberised to toughen it up and better repel water.

THE RE-ENFORCED HEAVY DUTY REEL LEASH

The Oceanus REEL Re-Enforced is the most durable, reliable, longest lasting unit to date. We highly recommend this Heavy Duty model to all kites and is the model we suggest be used anywhere board loss is a factor such as the open ocean, or rivers with strong current.

ACCESSORY/REPLACEMENT ITEMS

A) Rope extensions approximately 30 inches long 1/4 inch diameter rope doubled over, stitched, glued, and rubberised.

B) Nylon leash straps stitched at one end and rated at 460 pounds.

C) Shock cords with **NEW** sleeve added.
